

Data Analytics & Visual Report

Dataset Focus: Mindanao Municipal Waste Generation

1. Data Cleaning Protocol Log

- **Raw Input Problem: Missing values, duplicate rows, and inconsistent units.
- **AI Cleaning Instruction: "Remove duplicates, fill missing values, and convert all data to Metric Tons (MT)."
- Result: Successfully cleaned and standardized the dataset.

2. Visualizations Generated

3. Human Analytical Narrative

"The charts show that waste generation in Mindanao has increased over the years. Some provinces have higher waste recovery rates than others, indicating differences in waste management efficiency. The findings highlight the need for stronger recycling programs and improved waste management facilities across the region."
